

Top security with encrypted data in highly flexible flash configurations from 128MB to 128GB

**Premiere at SPS 2013: The new CmStick/M offers CodeMeter security with encrypted USB Flash Drive**

Karlsruhe, Germany – CodeMeter is globally acknowledged as a smart card based solution for integrity protection, know-how protection and flexible licensing of software and data. The new CmStick/M blends these security properties with an encrypted fast flash drive; the result is a compact USB stick having a sturdy and classy metal body. Wibu-Systems introduces this new device at SPS IPC Drives 2013, booth 640, hall 7.

The CmStick/M includes the CodeMeter smart card chip characterized by its extreme security features, and a new 32-bit ARM-based USB controller equipped with hardware AES encryption. Thus, all data is stored encrypted on the flash memory. An internal  $\mu$ SD socket allows the alternative use of high-quality SLC flash memory, ideal for industrial usage, or cost effective MLC. An additional variant makes use of eMMC NAND flash.

The CmStick/M (P/N 1011-03-xxx) is available with a capacity ranging between 128MB and 16GB in case of SLC flash memory, or 8 to 128GB for MLC; it optionally comes with extended environment temperature range.

Oliver Winzenried, CEO and founder of Wibu-Systems, explains: “The new CmStick/M combines CodeMeter and USB flash drive functionalities with unprecedented flexibility and security. The complete AES encryption of data on the NAND memory without loss in performance allows the integration of flash memory in the form of a  $\mu$ SD card inside the CmStick/M. Hence, depending on customers’ requirements, cost effective MLC memory or wide range temperature supporting and high reliable SLC memory can be used.”

More than 20 years of Perfection in Software, Document, Media and Access Protection

WIBU-SYSTEMS AG (WIBU®), founded in 1989 by Oliver Winzenried and Marcellus Buchheit, is an innovative security technology leader in the global market of secure software licensing. The broad range of Wibu-Systems solutions is unique and offers digital asset, intellectual property and integrity protection to application fields ranging from computers to mobile, from embedded automation to cloud computing, from SaaS to virtualized models.
