

Software protection, license management, and security, now compact like never before

### **Hannover Messe 2016: New CodeMeter ASIC just right for PCBs**

Karlsruhe, Germany – Wibu-Systems introduces the new CodeMeter ASIC, the most compact form factor of its CodeMeter product lineup, at this year's Hannover Messe, in hall 8, booth D05. Manufacturers can solder and embed this component directly onto their PCBs, and deliver software protection, licensing, and security features all at once. This ASIC is particularly recommended for small devices or embedded boards; medical and measuring devices are among the top areas of application that can benefit immediately from the space saved in their board designs.

CodeMeter ASIC supports both USB and SPI communications and is ready to operate in environments subject to extreme temperatures fluctuations between -40°C and +105°C. The component is delivered in a 5x5mm VQFN 32 package.

Oliver Winzenried, CEO and Founder of Wibu-Systems, explains: "The new CodeMeter ASIC is the ideal complement to our range of hardware protection repositories. The great versatility of our hardware lineup allows manufacturers to pick and choose the type that best suits their needs. Our security experts will be glad to share their advice with our visitors at the Hannover Messe."
