

## Wibu-Systems Product Lifecycle

Wibu-Systems offers updates for the products:

- CodeMeter Runtime
- CodeMeter Protection Suite

These updates include bug fixes, product extensions, and product enhancements. Registered customers can obtain them as part of their warranty or support contract.

Wibu-Systems abides by the following lifecycle principles:

- All new versions are backwards compatible and thus fully replace previous versions.
- Operating systems are generally supported by Wibu-Systems for as long as they are covered by the mainstream support of their respective vendors.
- Operating systems that are in a phase of extended support by their manufacturer are only supported by Wibu-Systems by signing an individual support contract for Extended Support.

### Lifecycle Timeframe

In the CodeMeter Runtime / CodeMeter Protection Suite column, you will find the latest software version released for each operating system.

During Standard Support, Wibu-Systems provides bug fixes, product extensions, and product enhancements. Silver/Gold Support is optionally available with a support contract and will allow standard operating system support including guaranteed response times and faster access to hotfixes depending on your chosen level of support.

During the paid Extended Support of a specific operating system, Wibu-Systems provides bug fixes only.
